

IN THE CLAIMS

- 1 1. (currently amended) A method of identifying a presence of a first ~~material~~ fluid in
2 an earth formation having a first transverse nuclear magnetic spin relaxation time
3 T_2 in a mixture with a second ~~material~~ fluid in an earth formation having a second
4 transverse nuclear magnetic spin relaxation time T_2' greater than said first
5 transverse relaxation time, said first material comprising a small fraction of the
6 mixture, the method comprising:
- 7 (a) using a magnet to produce a static field in a region of examination in said
8 earth formation and align nuclear spins in said region substantially
9 parallel to a direction of said static field;
- 10 (b) applying a pulse sequence
11 A1 - τ - B1 τ - A2 - TW - A3
12 where A1 is a first excitation pulse, τ is a Carr-Purcell time, B1 is a first
13 refocusing pulse, A2 is forced inversion pulse, A3 is a second excitation
14 pulse, and TW is a wait time, and
- 15 (c) determining a value of TW for which a resulting signal from said second
16 ~~material~~ fluid in said earth formation is substantially zero.
- 17
- 1 2. (previously presented) The method of claim 1 wherein said first excitation pulse
2 comprises a pulse having a tip angle substantially equal to 90° .
3
- 1 3. (previously presented) The method of claim 1 wherein said second excitation
2 pulse comprises a pulse having a tip angle substantially equal to 90° .

10/649,423

3

1 4. (previously presented) The method of claim 1 wherein said first refocusing pulse
2 comprises a pulse having a tip angle substantially equal to 180° .

3

1 5. (previously presented) The method of claim 1 wherein determining said value of
2 TW further comprises applying a sequence of refocusing pulses B_{2i} after said
3 second excitation pulse and determining a value of TW for which substantially no
4 spin echo signals are produced by said sequence of refocusing pulses.

5

1 6. (previously presented) The method of claim 5 wherein at least one of said
2 sequence of refocusing pulses comprises a pulse with a tip angle substantially
3 equal to 180° .

4

1 7. (previously presented) The method of claim 1 further selecting τ to satisfy the
2 condition

3
$$T_2' \gg \tau \gg T_2.$$

4

1 8. (previously presented) The method of claim 5 further comprising:

2 (i) repeating (b) with different values of TW until no free induction decay
3 signal after the second excitation pulse A3 is produced;

4 (ii) repeating (b) with a value of TW altered from the value determined in (i);
5 and

6 (iii) analyzing a resulting free induction decay signal.

10/649,423

7

1 9. canceled

2

1 10. (previously presented) The method of claim 9 further comprising conveying said
2 magnet on a logging tool into a borehole into said earth formation.

3

1 11. (previously presented) The method of claim 10 wherein said logging tool is
2 conveyed on a wireline.

3

1 12. (previously presented) The method of claim 10 wherein said logging tool is
2 conveyed on a drilling tubular.

3

1 13. (previously presented) A system for identifying a presence of first fluid having a
2 first transverse nuclear spin relaxation time T_2 in a mixture in an earth formation
3 with a second fluid having a second transverse spin relaxation time T_2' greater
4 than said first transverse relaxation time, said first fluid comprising a small
5 fraction of the second fluid, the method comprising:

6 (a) a logging tool conveyed into a borehole into said earth formation,

7 (b) a magnet on said logging tool for producing a static field in a region of
8 said earth formation including said mixture, said magnet aligning nuclear
9 spins in said region substantially parallel to a direction of said static field;

10 (b) a transmitter on said logging tool for applying a radio frequency pulse
11 sequence

10/649,423

12 A1 - τ - B1 - τ - A2 - TW - A3

13 to said mixture in said region, where A1 is a first excitation pulse, τ is a
14 Carr-Purcell time, B1 is a first refocusing pulse, A2 is forced inversion
15 pulse, and A3 is a second excitation pulse,

16 (c) a receiver on said logging tool for receiving signals resulting from said
17 nuclear spins resulting from application of said pulse sequence; and

18 (d) a processor for determining a value of TW for which a resulting signal
19 from said second fluid is substantially zero.

20

1 14. (previously presented) The system of claim 13 wherein said first excitation pulse
2 comprises a pulse having a tip angle substantially equal to 90° .

3

1 15. (previously presented) The system of claim 13 wherein said second excitation
2 pulse comprises a pulse having a tip angle substantially equal to 90°

3

1 16. (previously presented) The system of claim 13 wherein determining said value of
2 TW further comprises applying a sequence of refocusing pulses B_2 after said
3 second excitation pulse and determining a value of TW for which substantially no
4 spin echo signals are produced by said sequence of refocusing pulses

5

1 17. (previously presented) The system of claim 13 wherein said first refocusing pulse
2 comprises a pulse having a tip angle substantially equal to 180° .

3

10/649,423

- 1 18. (previously presented) The system of claim 16 wherein at least one of said
2 sequence of refocusing pulses comprises a pulse with a tip angle substantially
3 equal to 180° .
4
- 1 19. (previously presented) The system of claim 13 wherein $T_2' \gg \tau \gg T_2$.
2
- 1 20. (previously presented) The system of claim 13 wherein said processor further
2 performs:
3 (i) a repetition of (b) in claim 13 with different values of TW until no free
4 induction decay signal after the second excitation pulse A3 is produced;
5 (ii) a repetition of (b) in claim 13 with the value of TW altered from the value
6 determined in (i) ; and
7 (iii) analyzes a resulting free induction decay signal.
8
- 1 21. (previously presented) The system of claim 13 further comprising a wireline for
2 conveying said logging tool into said borehole.
3
- 1 22. (previously presented) The system of claim 13 further comprising a drilling
2 tubular for conveying said logging tool into said borehole.
3
- 1 23. (previously presented) The system of claim 13 wherein said processor is on said
2 logging tool.
